Art Unit: 3721

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a trigger, classified in class 173, subclass 120.
 - II. Claims 7-12, drawn to a pneumatic tool, classified in class 173, subclass221.
 - III. Claims 13-17, drawn to a method of actuating a pneumatic tool, classified in class 173, subclass 1.
- 2. The inventions are distinct, each from the other because:
- 3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not rely on the use of a primary or secondary switch, nor does it require the valve to be in either an open or closed configuration depending on a predetermined configuration. The subcombination has separate utility such as a pneumatic tool not requiring the use of a piston such as a pneumatic wrench.
- 4. Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be

Application/Control Number: 10/787,265

Art Unit: 3721

practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus such as a pneumatic tool not requiring the use of a piston such as a pneumatic wrench.

- 5. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the particulars of invention III do not require the use of a primary or secondary switch, nor does it require the valve to be in either an open or closed configuration depending on a predetermined configuration.
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Durand whose telephone number is 571-272-4459. The examiner can normally be reached on 0730-1800, Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I. Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
